

WEEK 5 PROJECT REPORT

Ludo Star Game Using Java

Student Information

Name : Maisha Jaman Mahi

ID: 11240321722

Project Title: Ludo Star Game

Course: Software Development I

Week 5

1. Introduction

In Week 5, the main focus was implementing the token movement system in the Ludo Star Game. The token movement is based on the value obtained from the dice. This allows the player to move their token forward on the Ludo board according to the dice value.

2. Objective

The main objectives of Week 5 were:

- Implement token movement.
- Move tokens according to dice values.
- Update the token position after each move.
- Display the token at its new position on the board.

3. Week 5 Work Completed

During Week 5, the following tasks were completed:

- Implemented the token movement algorithm.
- Connected token movement with the dice system.

- Used dice values to determine the number of steps.
- Updated the position of the player's token.
- Displayed the token in its updated position on the board.

4. Coding Progress

The token movement system was successfully implemented based on the dice value. When a player rolls the dice, the token moves forward according to the number obtained.

Current implemented features:

- Token position tracking
- Dice-based token movement
- Position update after movement
- Token display on the board

5. Challenges Faced

- Managing the token's current position.
- Connecting dice values with token movement.
- Ensuring the token moves the correct number of steps.

6. Conclusion

Week 5 focused on implementing token movement in the Ludo Star Game. The token can now move according to the dice value, and its position is updated on the game board. This completed an important part of the game's basic functionality.
