

WEEK 9 PROJECT REPORT

Ludo Star Game Using Java

Student Information

Name: Maisha Jaman Mahi

ID: 11240321722

Project Title: Ludo Star Game

Course: Software Development I

Week 9

1. Introduction

In Week 9, the main focus was testing, debugging, improving the user interface, and making the game more responsive and user-friendly. Several bugs found during gameplay testing were fixed, and improvements were made to the player selection and game interface.

2. Objective

The main objectives of Week 9 were:

- Test the game and identify existing bugs.
- Fix gameplay, sound, and interface-related problems.
- Improve UI responsiveness and layout.
- Improve the New Game and player selection system.
- Allow players to select the number and colors of players.
- Improve overall game stability and user experience.

3. Week 9 Work Completed

During Week 9, the following tasks were completed:

- Tested different gameplay situations and fixed identified bugs.
- Fixed the dice display issue where the dice number was not displayed correctly.
- Fixed the HOME sound effect so that "home.wav" plays when a token reaches HOME.
- Fixed the New Game and 4-player launching issue.
- Fixed the token entry sound issue by improving the "enter.wav" audio file.
- Improved the game board and side panel layout for better UI responsiveness.
- Improved the player information display.
- Added support for selecting 2, 3, or 4 players when starting a new game.
- Added color selection for 2-player and 3-player games.
- Updated the game logic to keep track of only the selected active players.
- Updated the board so that only active players' tokens are displayed.
- Updated turn rotation according to the selected players.
- Improved the New Game flow and overall user interaction.

4. Coding Progress

The testing and improvement features were implemented successfully. The game was tested with different player configurations and gameplay situations. The player management system was also improved so that selected colors can participate in the game without affecting the existing movement, dice, capture, sound, and winning logic.

Current implemented features:

- Bug fixing and gameplay testing
- Improved UI responsiveness
- Improved game layout
- 2, 3, and 4-player selection
- Player color selection
- Active player management
- Dynamic player display
- Improved turn management
- Improved sound handling
- New Game improvements

5. Challenges Faced

- Finding and fixing bugs that occurred during different gameplay situations.
- Maintaining existing game rules while modifying the player selection system.
- Making the board and side panel display properly without unnecessary clipping.
- Managing selected players and colors correctly during gameplay.
- Ensuring sound effects work correctly with different game actions.
- Updating the user interface dynamically according to the selected players.

6. Conclusion

Week 9 focused mainly on testing, debugging, UI improvement, and improving the player management system of the Ludo Star Game. Several gameplay and sound-related bugs were successfully fixed, while the interface was improved to provide a better user experience. The addition of player number and color selection also made the New Game system more flexible. These improvements made the game more stable, responsive, and ready for further testing and final documentation.
